N;Alternate names: RNA nucleotidyltransferase (RNA-directed); RNA replicase
N;Contains: RNA-directed RNA polymerase (EC 2.7.7.48)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           C;Species: eggplant mosaic virus

A. Title: Nucleotide sequence of a spinach nitrate reductase cDNA.

A. Reference number: S11868; MUID:91355858; PMID:2103436

A. Molecule type: mRNA

A. Residues: 1-926 «PRO.

A. A. Rocession: S11868; MUID:91355858; PMID:210306D; GB:M32600; NID:9170118; PIDN:

Abbestription: Analysis of the complete coding sequence of DNA of alastrim variola minor A; Accession: F72156
A, Accession: F72156
A, Status: preliminary
A; Molecule type: DNA
A; Residues: 1-76 < SHC>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A,Cross-references: UNIPROT:Q85374; UNIPARC:UPI000061D20; EMBL:L22579; NID:g623595; PID:

Hoff T., Stummann B.M., Henningsen K.W.;

"Cloning and expression of a gene encoding a root specific nitrate reductase in bean (Phaseolus vulgaris).";

II. Physiol. Plantarum 82:197-204 (1991).

-!- FUNCTION: Nitrate reductase is a key enzyme involved in the first step of nitrate assimilation in plants, fungi and bacteria.

-!- CATALYTIC ACTIVITY: Nitrite + NAD(+) + H(2)O = nitrate + NADH.

-!- COPACTOR: Binds 1 heme group (called cytochrome b-557).

-!- COPACTOR: Binds 1 heme group (called cytochrome b-557).

-!- COPACTOR: Binds 1 heme group (alled cytochrome b-557).

-!- SUBLUIT: Homodimer (By similarity).

-!- SUBLUITY: Belongs to the nitrate reductase family.

-!- SIMILARITY: Contains 1 cytochrome b5 heme-binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Phaseolus vilgaris (Kidney bean) (French bean).

Submitted (JAN-1995) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Nitrate reductase is a key enzyme involved in the first
step of nitrate assimilation in plants, fungi and bacteria.
-!- CATALYTIC ACTIVITY: Nitrite + NAD(+) + H(2)O = nitrate + NADH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cytochrome b5 heme-binding.

MICHARITY: ADDINA CHOME CORRESPONDING to two inducible nitrate reductase genes in soybean: analysis in wild-type and nr1 mutant.";

Plant Mol. 129:491-506(1995).

IL PINCTION: Nitrate reductase is a key enzyme involved in the first step of nitrate assimilation in plants, fungi and bacteria.

CITALYTIC ACTIVITY: Nitrite + NAD(+) + H(2)O = nitrate + NADH.

CIC COPACTOR: Binds 1 heme group (called cytochrome b-557).

CIC COPACTOR: Binds 1 molybdenum ion.

CIC SUBURT: Homodimer (By similarity).

CIC SUBURTY: Balongs to the nitrate reductase family.

CIC SIMILARITY: Contains 1 cytochrome b5 heme-binding domain.

0
-1- COFACTOR: Binds 1 molybdenum ion.
-1- SUBDNIT: Homodiner (By similarity).
-1- SIMILARITY: Belongs to the nitrate reductase family.
-1- SIMILARITY: Contains 1 cytochrome b5 heme-binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          57.5%; Score 46; DB 1; Length 890; 71.4%; Pred. Biol. 12:597-600(1989).

-!- FUNCTION: Nitrate reductase is a key enzyme involved in the first step of nitrate assimilation in plants, fungi and bacteria.

-!- CATALYTIC ACTIVITY: Nitrite + NAD(+) + H(2)O = nitrate + NADH.
-!- COPACTOR: Binds 1 FAD per subunit.
-!- COPACTOR: Binds 1 molydenum-pterin group per subunit.
-!- RNZYME REGULATION: Regulated by the nitrogen source and controlled by the circadian rhythm.
-!- SUBUNIT: Homodimer.
-!- SUBUNIT: Homodimer.
-!- SIMILARITY: Belongs to the nitrate reductase family.
-!- SIMILARITY: Contains 1 cytochrome b5 heme-binding domain.

RT first step for sequence modification analysis.";

Gene 128:147-154(1993).

CC -1- FUNCTION: Nitrate reductase is a key enzyme involved in the first step of nitrate assimilation in plants, fungi and bacteria.

CC -1- CATALYTICA CATIVITY: Nitrate + NADH+, + H(2)O = nitrate + NADH.

CC -1- COFACTOR: Binds 1 FAD per subunit.

CC -1- COFACTOR: Binds 1 Molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

CC -1- COFACTOR: Binds 1 molybdenum-pterin group per subunit.

-!- FUNCTION: Nitrate reductase is a key enzyme involved in the first step of nitrate assimilation in plants, fungi and bacteria.
-!- COPACTOR: Binds 1 hamb group (called cytochrome b-557).
-!- COPACTOR: Binds 1 hamb group (called cytochrome b-557).
                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

Mol. Gen. Genet. 227:411-416(1991).

C -1 FUNCTION: Nitrate reductase is a key enzyme involved in the first atep of nitrate assimilation in plants, fungi and bacteria.

C -1 CATALYTIC ACTIVITY: Nitrite + NAD(+) + H(2)O = nitrate + NADH.

C -1 COFACTOR: Binds 1 heme group per subunit.

C -1 COFACTOR: Binds 1 molybdenum-piterin group per subunit.

C -1 SIMILARITY: Belongs to the nitrate reductase family.

C -1 SIMILARITY: Contains 1 cytochrome b5 heme-binding domain.

-i- SIMILARITY: Belongs to the nitrate reductase family.
-i- SIMILARITY: Contains 1 cytochrome b5 heme-binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                InterPro; IPR001199; Cyt B5.
